ELVIRA NURGALIEVA

Industrial and Manufacturing Engineer | Colorado Engineer Intern EI.0081521

linkedin.com/in/elvira-n | elvira-n.com

PROFESSIONAL SUMMARY

Colorado Engineer Intern with the FE Industrial Engineering exam passed and experience in technical discovery, workflow analysis, CAD-based reverse engineering, operations coordination, and high-volume retail operations. Focused on process improvement, material flow, technical documentation, and cross-functional problem solving. U.S. permanent resident; no sponsorship required.

CORE QUALIFICATIONS

Process improvement and workflow analysis | Requirements analysis | Root-cause analysis, 5 Whys, fishbone analysis | Lean and DMAIC concepts | Process mapping and workflow redesign | Standard work | Material flow and inventory visibility | Technical documentation | Trade-off analysis | Stakeholder communication and technical training | Cross-functional coordination | Excel-based analysis

PROFESSIONAL EXPERIENCE

Sales Associate

Apr 2024 - Present

The Home Depot | Colorado

- Operate in a high-volume environment that requires rapid prioritization, accurate information, cross-department coordination, and resolution of customer and operational issues under established safety and operating procedures.
- Clarify customer and contractor requirements, interpret product specifications, identify constraints, and coordinate practical solutions when standard approaches do not fit the need.
- Apply Gemba observation, process mapping, 5 Whys, fishbone analysis, and future-state thinking in an independent Kaizen study of shelving and replenishment flow, with attention to bottlenecks, rework, and standard work.

Sales Engineer - 3D Scanning and Reverse Engineering

Aug 2018 - Feb 2022

Thor3D | Moscow, Russia

- Led structured technical discovery with engineering and manufacturing customers to clarify objectives, constraints, workflow pain points, software compatibility, accuracy needs, and implementation requirements.
- Mapped and evaluated workflows across equipment, software, data processing, reverse engineering, CAD, inspection, and user methods; identified bottlenecks, failure points, and opportunities to improve repeatability and data quality.
- Diagnosed technical and workflow issues, documented findings, coordinated corrective guidance, and performed trade-off and feasibility analyses balancing functionality, accuracy, cost, implementation effort, operational risk, and user adoption.
- Created CAD and scan-derived models using SolidWorks, Fusion 360, Geomagic Design X, Rhinoceros, and Blender; supported adoption of digital engineering workflows.

Dispatch Coordinator

Dec 2017 - Jul 2018

MultiMedia Communications Ltd | Christchurch, New Zealand

- Coordinated technicians, subcontractors, suppliers, schedules, materials, and project documentation for telecommunications infrastructure installations.
- Monitored execution, resolved scheduling and resource conflicts, maintained operational records, and escalated issues affecting service commitments and project delivery.

SELECTED ENGINEERING PROJECTS

Retail Material Flow Optimization - Concept study of material flow, replenishment visibility, and decision points in a high-volume retail environment.

Reverse Engineering Workflow and Quality-Risk Analysis - Mapped capture-to-CAD flow, handoffs, verification points, user dependencies, and data-quality risks to improve workflow repeatability.

Manufacturing Process Improvement - Engineering concept work focused on process gaps, flow constraints, and system-level improvements for manufacturing support environments.

CREDENTIALS AND EDUCATION

Colorado Engineer Intern, active - EI.0081521 | **Fundamentals of Engineering**, Industrial Engineering - Passed

Bauman Moscow State Technical University - Engineering Degree, Systems Engineering; NCEES evaluated as equivalent to a U.S. engineering bachelor's degree.

Southern Institute of Technology - Postgraduate Diploma, Business Enterprise / Management | **Georgia Institute of Technology** - Engineering Mechanics coursework and certificates

TECHNICAL TOOLS AND PROFESSIONAL DEVELOPMENT

Tools: Excel, Word, PowerPoint, Outlook, Google Workspace, SolidWorks, Fusion 360, Geomagic Design X, Rhinoceros, Blender, Git, GitHub.

In progress: Lean Six Sigma Green Belt study, Python for engineering and data analysis, Power BI, and SQL/Python analytics. Uses generative-AI productivity tools and prompt engineering to structure analysis and improve technical documentation.
